COMBIONIC

ENABLES a human centric approach to enterprise IT solutions with a unique

„CONTEXT BASED ENTERPRISE SOLUTIONS PARADIGM“:

Support humans with the relevant information or documents and relevant options for action in the context of dedicated situations at user's workplaces.

INFORMATION OVERLOAD

in a fast changing world. Employees need to process more, often unstructured information than ever before.

New and changing rules and regulations are literally released on a daily basis.

Collaborative Content creation is not sufficiently supported today. Systems used by enterprise workers have not been built to cope with those challenges

THESE CHALLENGES

can be solved by making the content creating and consumption processes more efficient.

It is realized by integrating them into already used productivity environments like **Microsoft Office** using **smart Combionic-Technology**. Letting **people work in context** across multiple screens makes them productive and confident.

RELEVANCE & ATTENTION

Embed the solution in the daily work environment to avoid context switching and support efficient use of attention and only show information and potential actions which are relevant for the task at hand using the **innovative Combionic Business Gateway Technology**.

INTEGRATION BY CONTEXT

the solution components are embedded into the daily work environment – integrated by the context the user is working in; Implemented by using patented context recognition & semantic components. **CONTEXT AWARE COMPUTING** (Gartner) is supported in Microsoft Office Applications as Word, Excel or Microsoft Outlook.
